CHAMPAIGN, ILLINOIS 61821
PHONE: (217) 359-6602

PAUL D. SCHOMER Acoustical Engineer

BS, Electrical Engineering, University of Illinois, 1965.
MS, Electrical Engineering-Acoustics, University of California, Berkeley, 1966.
Ph.D., Electrical Engineering-Acoustics, University of Illinois, 1971.

EXPERIENCE

Dr. Schomer has extensive experience, publications, and patents in the areas of environmental noise and its assessment, human and community response to noise, instrumentation and methodology for the measurement and monitoring of noise, sound propagation, and acoustical measurements of building parameters. He is a consultant to industry and government and a research leader in acoustics. His recognition by his peers as an international leader in the area of environmental noise is demonstrated by his chapters in reference books, his more than 50 refereed publications, his leadership in Standards organizations and professional societies, and his awards and honors. Dr. Schomer is also Standards Director, Emeritus, for the Acoustical Society of America. As an international leader in the area of environmental noise, Dr. Schomer is recently retired after being chairperson, for about 20 years, of the United States delegation to International Organization for Standardization (ISO) Acoustics and Noise committees, past chairperson of the American National Standards Institute (ANSI) Committee dealing with noise, chairperson of the ISO working groups which deal with environmental noise and with impulsive noise measurement, chairperson of the ANSI/ASA working group which deals with environmental noise, and he is the United States representative to the International Organization for Standardization in the areas of environmental noise, soundscapes, and impulsive sources. After 15 years, he is the recently Emeritus Standards Director for the Acoustical Society of America, a past member of both the Society of Automotive Engineers Aircraft Noise and Construction/Agriculture Noise Committees, and former Executive Director, past vice-president for membership, and twice a past member of the board of the Institute of Noise Control Engineering. He is also a past adjunct Professor of Electrical and Computer Engineering (Acoustics) and member of the graduate faculty of the University of Illinois

Dr. Schomer has over 50 years of experience dealing with noise measurement and the effects of noise on people and communities. This experience includes airport, aircraft, helicopter, construction and traffic noise, general industrial and urban noise, wind turbine noise, blast and mining noise, small arms gunfire noise. The citation for his selection as a Fellow of the Acoustical Society of America references his studies on community response to noise, and most of his work with the National Academy of Science has been concerned with noise assessment.

EXHIBIT

40 

MEMBER FIRM, NATIONAL COUNCIL OF ACOUSTICAL CONSULTANTS

MEMBERSHIPS AND AWARDS

Fellow - Acoustical Society of America.

Member, Board Certified, Institute of Noise Control Engineering

Selected as Corps of Engineers Engineer of the Year and One of the Top 10 Federal Engineers of the Year (1990)—National Society of Professional Engineers

Several times a member of the board and/or officer; Institute of Noise Control Engineering.

Former Executive Director, Institute of Noise Control Engineering of the USA, Inc.

Standards Director, Emeritus, Acoustical Society of America

Recently retired after 14 years as Chairman, Acoustical Society of America Committee on Standards

Recently retired after about 20 years as Head of U.S. Delegation, International Organization for Standardization, Technical Committee 43 (acoustics) and Subcommittee 1 (noise).

Convener (chairman), International Organization for Standardization, Working Group 45 dealing with environmental noise assessment.

Fellow – Institute of Noise Control Engineering

Reviewer for *Applied Mechanics Review*, *Journal of the Acoustical Society of America*, and *Noise Control Engineering Journal*.

Fellowship, University of Illinois (1968-1971).

Registered Professional Engineer (DC).

Member, Institute of Noise Control Engineering, Acoustical Society of America, Institute of Electrical and Electronic Engineers, German Acoustical Society (DEGA), European Acoustical Association

BOOKS

Handbook of Acoustical Measurements and Noise Control, Chapter 50. Community Noise Measurements, 2nd edition, John Wiley and Sons, Inc., New York, 1991.

Reference Data for Radio Engineers, Chapter 40. Electroacoustics, 7th edition, ITT Press, a subsidiary of MacMillan, Inc., Indianapolis, 1985.

Reference Data for Radio Engineers, Chapter 40. Electroacoustics, 8th edition, Sams Publishing, Prentice-Hall Computer Publishing, Indianapolis, 1993.

MAJOR JOURNAL PUBLICATIONS

"Preliminary results of a visitor survey of the acoustic environment at the Grand Canyon National Park," *Proceedings of Meetings on Acoustics* (POMA), 23 040001 (2015).

"A theory to explain some physiological effects of the infrasonic emissions at some wind farm sites," *J. Acoust. Soc. Am.*, **137**(3), 1356-65 (2015).

"A critical analysis of: Wind Turbine Health Impact Study: Report of Independent Expert Panel," Paper 3aNs2," 165th Meeting of the Acoustical Society of America (ASA), Proceedings of Meetings on Acoustics (POMA) Volume 20, 2014, paper published on 26 March 2014.

"Respondents' answers to community attitudinal surveys represent impressions of soundscapes and not merely reactions to the physical noise," *Journal of the Acoustical Society of America*, **134**(1) Pt. 2, 767-772, July 2013.

"Criteria for wind-turbine noise immissions," 21st International Congress on Acoustics (ICA), 165th Meeting of the Acoustical Society of America (ASA), and 52nd Meeting of the Canadian Acoustical Association, Montreal, Canada, 2-7 June 2013.

"Can wind turbine sound that is below the threshold of hearing be heard? 21st International Congress on Acoustics (ICA), 165th Meeting of the Acoustical Society of America (ASA), and 52nd Meeting of the Canadian Acoustical Association, Montreal, Canada, 2-7 June 2013.

"Role of community tolerance level (CTL) in predicting the prevalence of the annoyance of road and rail noise," *Journal of the Acoustical Society of America*, **131**(4), 2773-2786, April 2012.

"A first-principles model for estimating the prevalence of annoyance with aircraft noise exposure," *Journal of the Acoustical Society of America*, **130**(2), 791-806, August 2011.

"A re-analysis of Day-Night Sound Level (DNL) as a function of population density in the United States," *Noise Control Engineering Journal*, **59**(3), 1xx-1xx, (May/June 2011).

"Limitations of current dosage-response relationships for predicting the prevalence of annoyance due to transportation noise," INTERNOISE 2011, Osaka Japan, 4-7 September 2011.

"Wind-induced pseudo-noise and leaf-rustle noise," *Noise Control Engineering Journal*, **58**(2), 121-131, (March/April 2010).

"Explanation of and conclusions drawn from American National Standard Methods for estimation of awakenings associated with outdoor noise events heard in homes," INTERNOISE 2010, paper 1126, Lisbon Portugal, 13-16 June 2010.

"Proposed Ai-Weighting; a weighting to remove insect noise from A-weighted field measurements." INTERNOISE 2010, paper 594, Lisbon Portugal, 13-16 June 2010.

"On Efforts to Standardize a Graphical Description of the Soundscape Concept," INTERNOISE 2010, paper 593, Lisbon Portugal, 13-16 June 2010.

“Wind-induced pseudo-noise and leaf-rattle noise,” INTERNOISE 2009, Paper IN09_584, Ottawa, Canada, 23-26 August 2009.

“The difference between Day-Night Average Sound Level and the European Union Day-Evening-Night Average Sound Level for a typical sample of 100 housing sites,” INTERNOISE 2009, Paper IN09_583, Ottawa, Canada, 23-26 August 2009.

“Visitor perception of park soundscapes: A research plan,” *Noise/News International*, **17**(2), 51-56, (June 2009).

“Uncertainties in measuring aircraft noise and predicting community response to it,” *Noise Control Engineering Journal*, **55**(1), 82-88, (January/February 2007).

“When there are audible rattle sounds, annoyance may depend only on the worst case— independent of number of events,” INTERNOISE 2006, Paper N190, Honolulu, HA, USA, 3-6 December 2006.

“A-weighting sometimes works for assessing environmental noise—sort of; it should be retired,” INTERNOISE 2006, Paper N202, Honolulu, HA, USA, 3-6 December 2006.

“A statistical description of sound propagation: A comparison of elevated and near-ground sources,” *Noise Control Engineering Journal*, **54**(3), 25-36, (May-Jun 2006).

“Biases introduced by the fitting of functions to attitudinal survey data,” NOISE-CON 2005, *Institute of Noise Control Engineering*, Minneapolis, MN, USA, 17-19 October 2005.

“Criteria for assessment of noise annoyance,” *Noise Control Engineering Journal*, **53**(4), 132-144, (July/August 2005).

“Overview of the theoretical development and experimental validation of blast sound absorbers,” *Noise Control Engineering Journal*, **53**(3), 70-80, (May/June 2005).

“Basic results from full-scale tests at Ft. Drum,” *Noise Control Engineering Journal*, **53**(3), 94-109, (May/June 2005).

“Some Important Factors in Community Response to Sonic Booms,” NOISECON 2004, *Institute of Noise Control Engineering*, Baltimore, MD, USA, 12-14 July 2004.

“The importance of proper integration of and emphasis on the low-frequency sound energies for environmental noise assessment,” *Noise Control Engineering Journal*, **52**(1), 26-39, (January/February 2004).

“Noise Assessments: Interaction with the Public—Simplicity and Truth Will Help,” INTERNOISE 2003, Paper N706, pp 1216-1220, Seogwipo, Korea, 25-28 August 2003.

“Does the Soundscape Concept Have Real Utility,” INTERNOISE 2003, Paper N161, pp 2825-2826, Seogwipo, Korea, 25-28 August 2003.

“Noise Assessment Metrics and Criteria in a United States Department of Transportation Multi-Modal Noise Model,” NOISECON 2003, Paper No. 023, *Institute of Noise Control Engineering*, Cleveland, OH, USA, 23-25 June 2003.

“A statistical description of ground-to-ground sound propagation,” *Noise Control Engineering Journal*, **51**(2), 69-80, (March/April 2003).

“On Normalizing DNL to Provide Better Correlation with Response,” *Sound & Vibration*, pp 14-23, December 2002.

“Further Results Using Loudness-Level Weighting to Assess Noise Annoyance,” NTERNOISE 2002, Paper No. N489, *Institute of Noise Control Engineering International*, Dearborn, MI, USA, 19-21 August 2002.

“Alternative Methods to A-Weighting for Environmental Noise Assessment,” NTERNOISE 2002, Paper No. N475, *Institute of Noise Control Engineering International*, Dearborn, MI, USA, 19-21 August 2002.

“Evaluation of loudness-level weightings for assessing the annoyance of environmental noise,” *Journal of the Acoustical Society of America*, **110**(5) Pt. 1, 2390-2397, (November 2001).

“Criteria for the Assessment of Noise Annoyance,” NOISECON 2001, Paper No. NC01_018, *Institute of Noise Control Engineering USA*, Portland, Maine, 29-31 October 2001.

“Use of the New ISO 226 Equal Loudness Contours as a Filter to Assess Noise Annoyance,” NTERNOISE 2001, Paper No. 197, *Institute of Noise Control Engineering International*, The Hague, Holland, 27-30 August 2001.

“A statistical description of blast sound propagation,” *Noise Control Engineering Journal*, **49**(2), 79-87, (March/April 2001).

“Using fuzzy logic to validate blast noise monitor data,” *Noise Control Engineering Journal*, **48**(6), 193-205, (November/December 2000).

“A comparison between the use of loudness level weighting and loudness measures to assess environmental noise from combined sources,” INTERNOISE 2000, Paper No. 101, *Institute of Noise Control Engineering International*, Nice, France, 27-30 August 2000.

“A test of proposed revisions to room noise criteria curves,” *Noise Control Engineering Journal*, **48**(4), 124-129, (July/August 2000).

“Proposed revisions to room noise criteria,” *Noise Control Engineering Journal*, **48**(3), 85-96, (May/June 2000).

“Loudness-Level Weighting for Environmental Noise Assessment,” *Acustica and Acta Acustica*, **86**(1), 49-61 (January/February 2000).

“Revision to the ISO 1996 series--Description, measurement and assessment of environmental sound,” INTERNOISE 98, Paper No. 190, *Institute of Noise Control Engineering International*, Christchurch, New Zealand, November 1998.

“On spectral weightings to assess human response, indoors, to blast noise and sonic booms,” *Noise Control Engineering Journal*, **46**(2), 57-71, (March/April 1998).

“Evaluation of a re-analysis of the relationship between the results obtained in laboratory and field studies on the annoyance caused by high-energy impulsive sounds,” *Noise Control Engineering Journal*, **45**(6), 251-255 (November/December 1997).

“A comparative study of human response, indoors, to blast noise and sonic booms,” *Noise Control Engineering Journal*, **45**(4), 169-182 (July/August 1997).

“The new ANSI method for assessing combined noise environments; comparison with other methods,” INTERNOISE 97, 1047-1052, *Institute of Noise Control Engineering International*, Budapest, Hungary, August 1997.

“On the contribution of noticeability of environmental sounds to noise annoyance,” *Noise Control Engineering Journal*, **44**(6), 294--305 (November/December 1996).

“Penalties for assessing helicopter noise annoyance—There is none?” NOISE-CON 96, 581-584, *Institute of Noise Control Engineering*, Seattle, WA, September 1996.

“A Comparative Study of Human Response to Blast Noise and Sonic Booms,” INTERNOISE 96, *Institute of Noise Control Engineering International*, Liverpool, UK, July 1996.

“Development of a New ANSI Standard for Assessment of Combined Noise Environments,” INTERNOISE 96, 3265-3270, *Institute of Noise Control Engineering International*, Liverpool, UK, July 1996.

“25 Years of progress in noise standardization,” *Noise Control Engineering Journal*, **44**(3), 141-148 (May/June 1996).

STATE OF ILLINOIS REPORTS

Proposed Revisions to Property-Line-Noise-Source Measurement Procedures, ENR Report No. REEA91/10, Illinois Department of Energy and Natural Resources, 1991.

Impulse Noise Study, ENR Report No. REEA90/16, Illinois Department of Energy and Natural Resources, November 1990.

A Demonstration of Airport Noise Impact Mitigation, ENR Report No. 83/25, Illinois Department of Energy and Natural Resources, June 1983.

The Economic Impact Study of Proposed Airport Noise Regulations, R774 Volume 1: Technical Study of Public Airports in Chicago, ENR Report No. 81/38, Illinois Department of Energy and Natural Resources, November 1981.

The Economic Impact Study of Proposed Airport Noise Regulations, R774 Volume 1: Technical Study of Public Airports Outside Chicago, ENR Report No. 81/02, Illinois Department of Energy and Natural Resources, January 1981.

Human and Community Response to Impulse Noise: A Literature Review, IEQ Report No. 78/07, Illinois Institute for Environmental Quality, March 1978.

Motorcycle Noise Levels: A Report on Field Tests, Report of the Illinois Task Force on Noise, June 1975.

Control of Noise from Motor Vehicles Part III: Technical Study in Support of Proposed Motor Vehicle Noise Regulations, Report of the Illinois Task Force on Noise, June 1974.

Sound Transmission Loss Between Spaces Connected by Multiple Paths: A New Measurement Technique, Ph. D. Thesis, University of Illinois, August 1971.

PATENTS

Logarithmic Statistical Distribution Analyzer, Patent No. 3995500.

Microphone Droop and Sensitivity Measurement Device, Patent No. 4347410.

TYPICAL PROJECT EXPERIENCE

AIRPORT NOISE ASSESSMENT AND PART 150 STUDIES

Conducting the acoustical analysis and measurements contained within airport Part 150 studies including (1) the generation of present and future, predicted noise contours, (2) the execution of noise monitoring, the comparison of monitoring results with noise contours, and the analysis of monitoring results by aircraft type, operation, and runway, and (3) the development and analysis of noise mitigation strategies.

HELIPORT DESIGN AND ASSESSMENT

Assessment of the heliport noise. Establishing the need for mitigation. Assessing mitigation alternatives.

ENTERTAINMENT NOISE

Evaluated measurements for a large, outdoor music venue. Evaluated band and DJ noise from a club as it affected the neighborhood. Suggested mitigation methods. Evaluated measurement and monitoring plans for an outdoor music performance arena.

EXPERT WITNESS REGARDING NOISE PREDICTION AND ITS EFFECTS ON PEOPLE

Numerous cases, the following are examples:

For the defense: Class action suit of homeowners against ARCO Oil.

For the plaintiff: Class action suit of homeowners against Peabody Coal Company.

For both of these, performed analysis of the physical noise and its predicted levels in the community, and assessed the received noise and its effect on individuals and the community.

For the defense/plaintiff: Predicted, measured and analyzed noise from parked outdoor refrigerator trucks in a special situation.

For the plaintiff: Predicted and analyzed the effect of strip-mining explosions on a distant factory structure.

For the plaintiff: Class action and community suits against airport noise including a \$128,000,000 settlement for the city of Minneapolis.

EXPERT WITNESS REGARDING THE AUDIBILITY AND NOTICEABILITY OF SIGNALS AND ALARMS

For the defense: Analyzed the audibility of gunshot sound.

For the defense: Analyzed the noticeability of off-road truck noise in a quarry delivery plant.

For the defense: Analyzed the audibility and noticeability of truck noise in the presence of other neighborhood noise.

For the plaintiff: Analyzed the audibility and noticeability of siren noise at cross intersection.

For the plaintiff: Analyzed the noticeability of sirens when there is more than one.

For the defense: Analyzed the audibility of breaking glass and its ability to set off a glass-break detector.

For the defense: Analyzed the ability of a fire alarm to wake up and warn a person.

For the plaintiff: Analyzed the ability of a fire alarm to warn someone.

For the defense: Analyzed the ability of a fireman's PASS device to be noticed at a fire scene.
